Art can be defined broadly as illusions as the audiences' sensations and meanings arise from the original artistic medium. My high-level goal is to develop computational tools to create artworks that helps fostering accessible art generation. I hope that the general public can produce and interact with pleasant pieces from simple inputs. Toward this end, I'm currently interested in image or sequence generation through Natural Language Processing, Representation Learning and Computer Vision.

EDUCATION

B.S. in Computer Science

University of Michigan

Sep. 2020 - Present Ann Arbor, MI

- GPA: 4.0/4.
- Featured courses: Data Structures & Algorithms; Computer Organization; Foundation of Computer Science; Machine Learning; Artificial Intelligence; Conversational AI; Linear Algebra; Statistics & Data Analysis

B.S. in Computer Science

University of Maryland

Aug. 2018 - May. 2020 College Park, MD

- GPA: 3.97/4.
- Featured Courses: Data Structures & Algorithms; Computer Systems; Discrete Mathematics; Programming Languages; Algorithms; Applied Probability & Statistics; Logic; Symbolic Logic; 2D Design; Drawing; Digital Art & Design; 3D Design; Rights & Wrongs of Killing People; Justice Matters

I ADMIRE

"When philosophy first noticed art it was in connection with the possibility of deception. "

- Arthur Danto
